

Container Pricing for IBM Z

Application Development & Test Solution

Problem

Today, many DevTest environments are being severely capped.

This makes DevTest inconvenient, often forcing it off hours and sometimes even bypassing critical pre-production testing.

Wouldn't it be nice...

To run whatever
DevTest
workloads you
need to run.

Whenever and
wherever you
need to run
them.

At prices that
anybody
would be
happy to pay.

About the DevTest Container

Container Pricing for IBM Z provides the infrastructure that delivers a standalone price points for DevTest workloads.

The Application Development and Test Solution offers dramatically increased capacity for no additional MLC costs.

How it works

Highly discounted full-capacity pricing, for standalone DevTest workloads.

Up to a 3x peak DevTest capacity, with no additional IBM MLC costs.

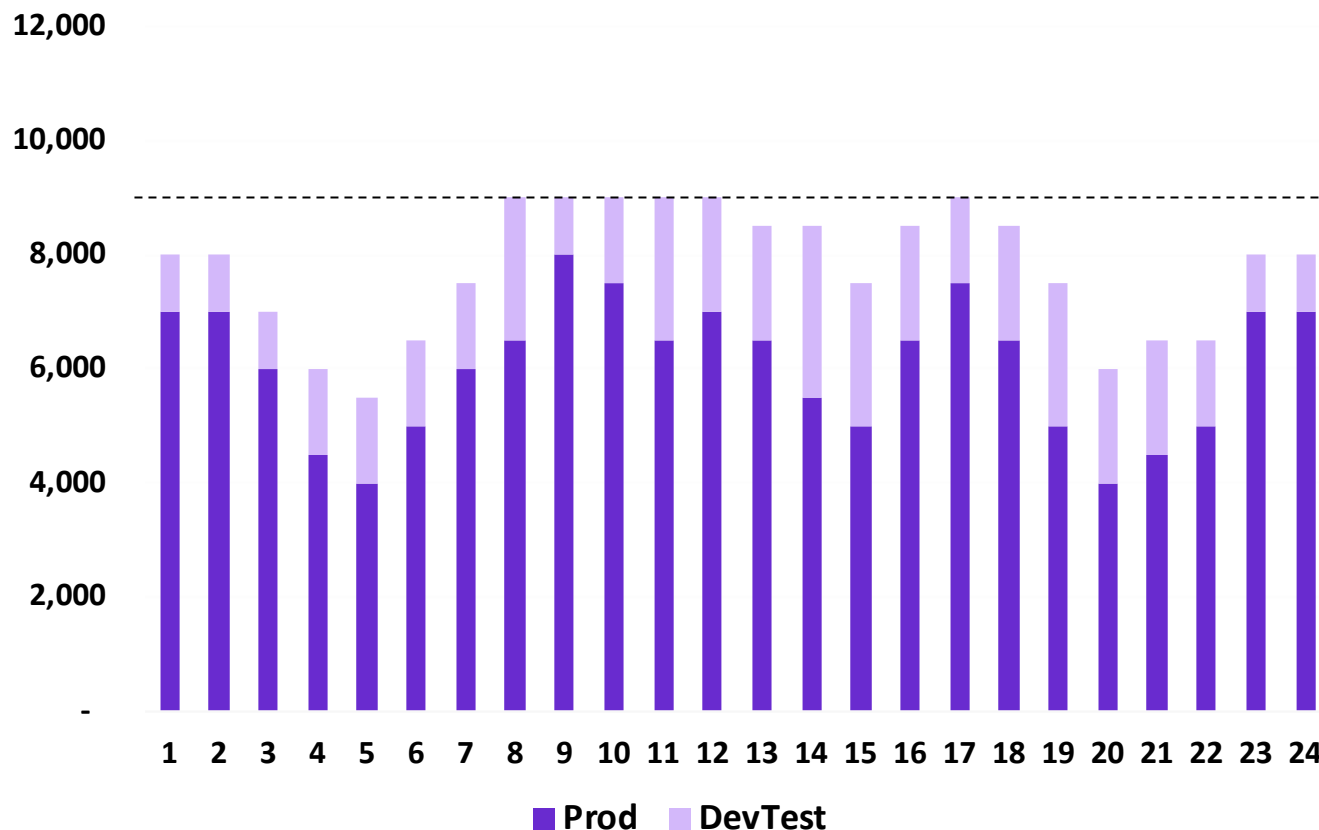

IBM OTC DevTest licenses offered at uniquely discounted prices.

Example

Consider this typical 24-hour period.

The total workload is capped at 9,000 MSUs.

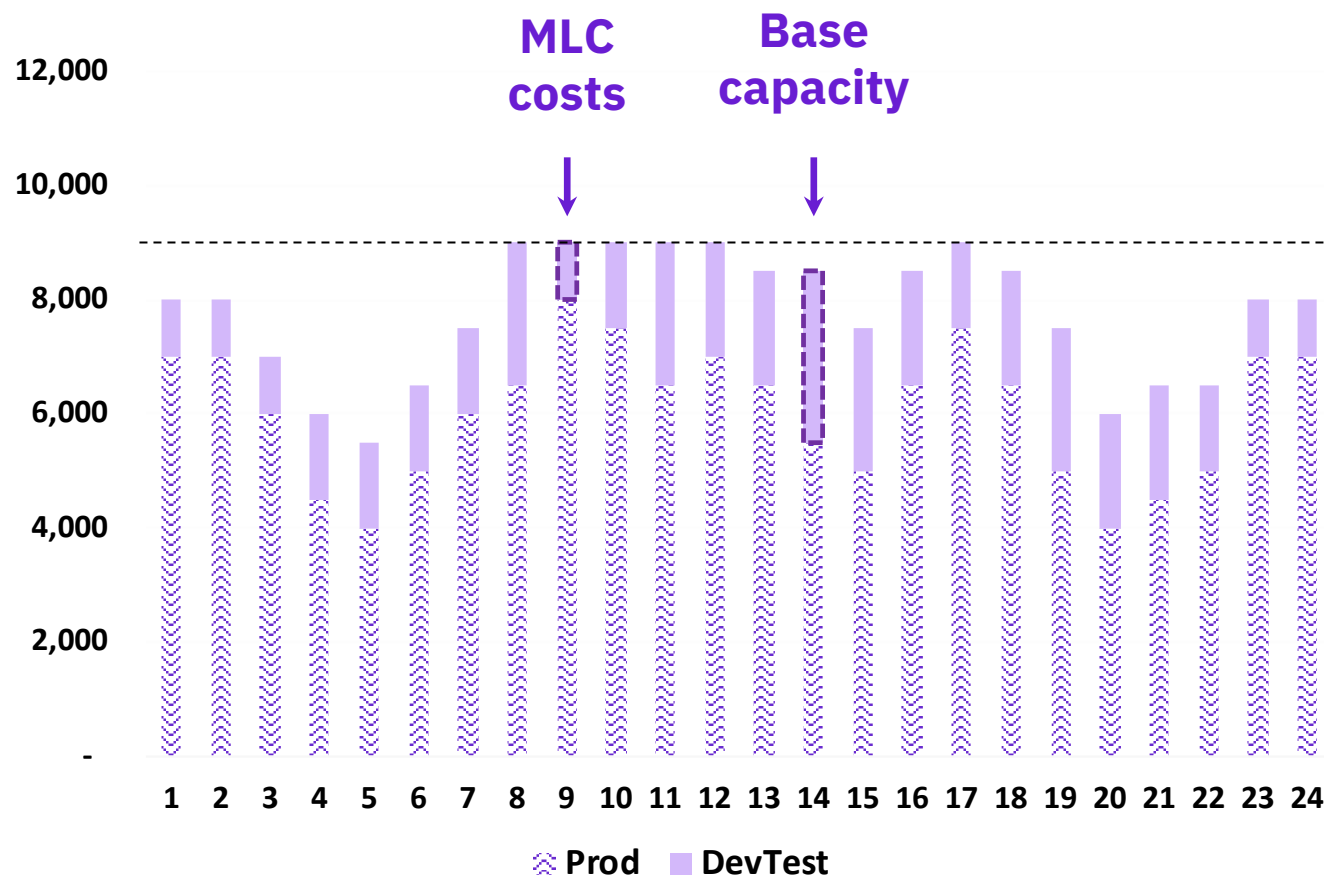

DevTest is capped in for multiple hours.

Example

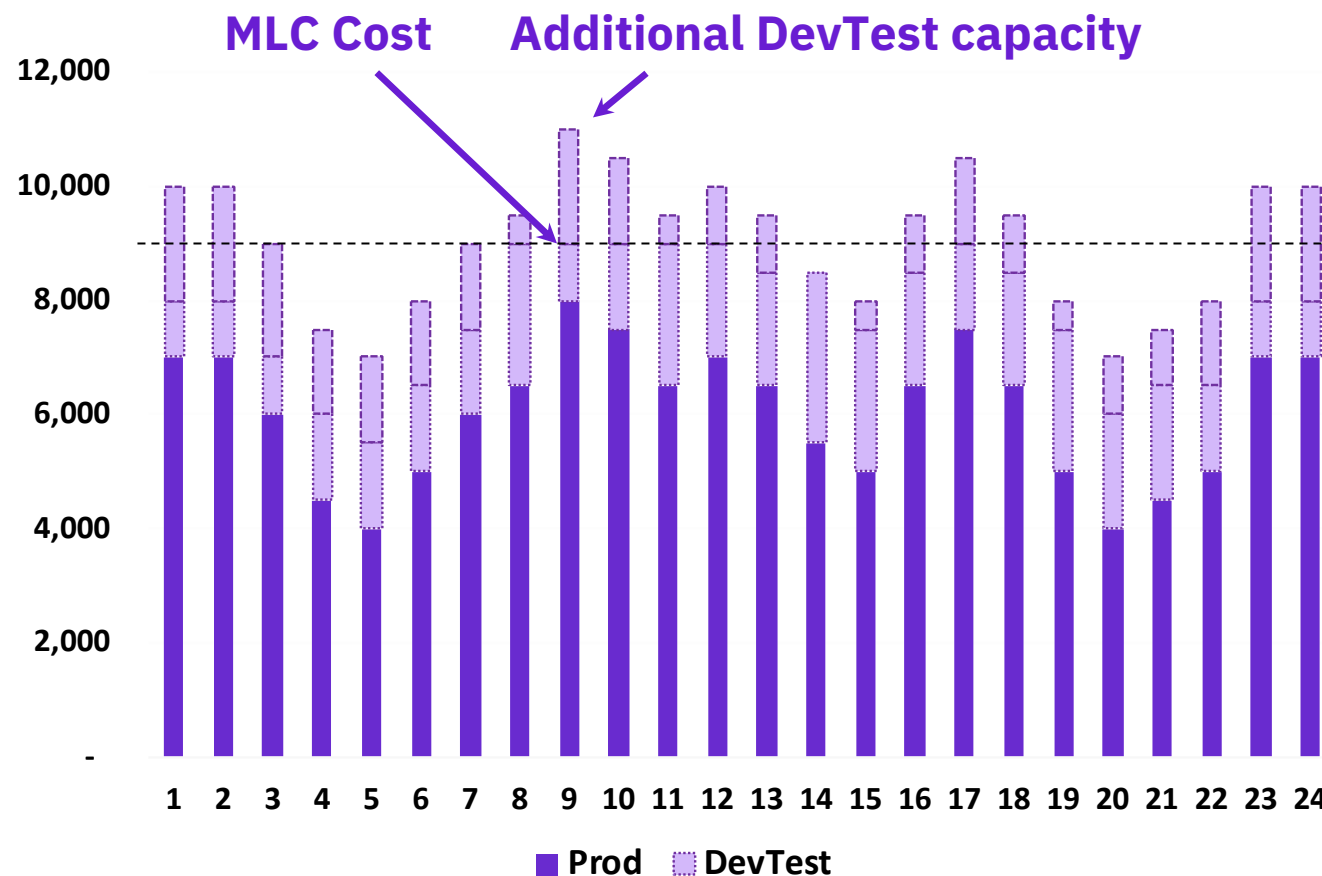

Initial DevTest MLC costs are derived from their exiting R4HA contribution.

DevTest base capacity is taken from the existing DevTest peak.

Example

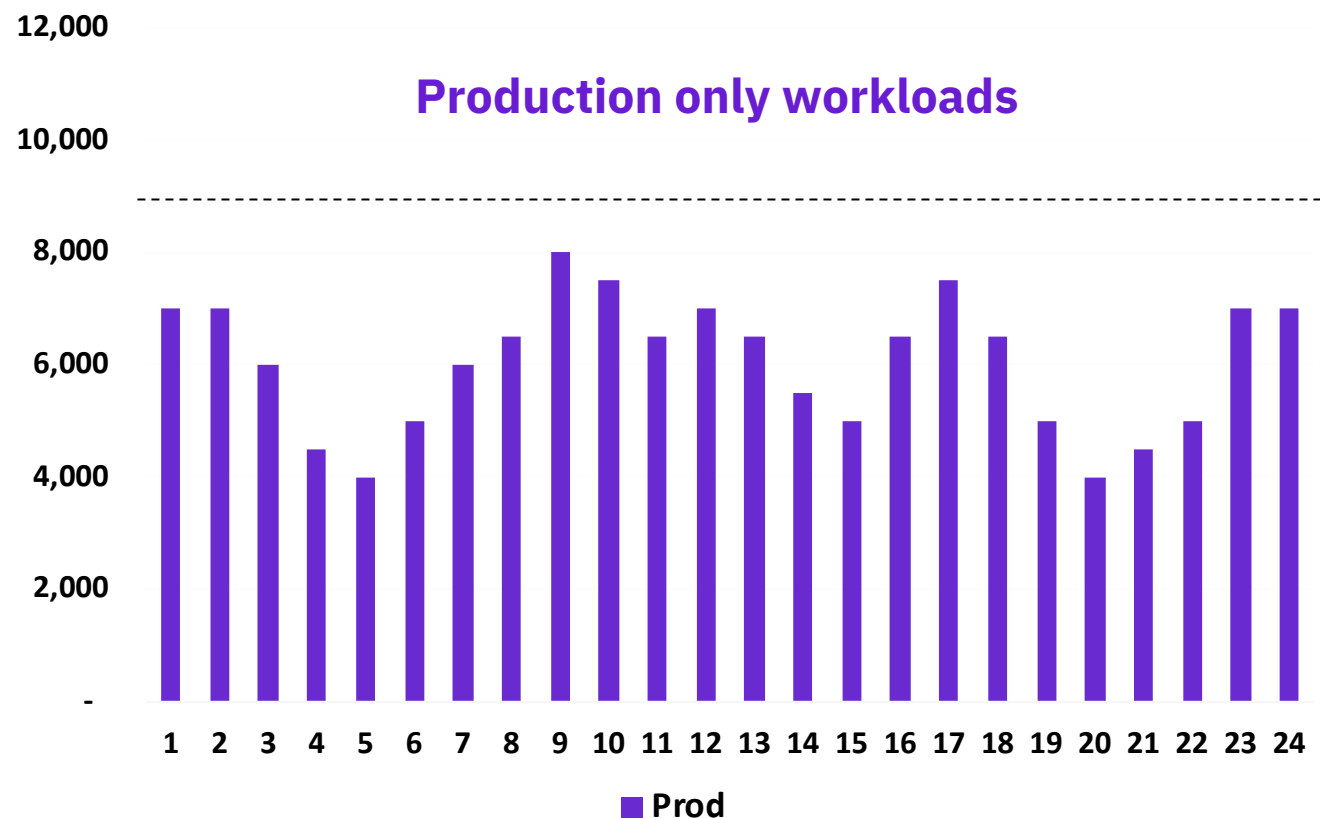

The base DevTest capacity can now be run at any time, without increasing MLC costs.

Example

Production workloads are still sub-capacity.

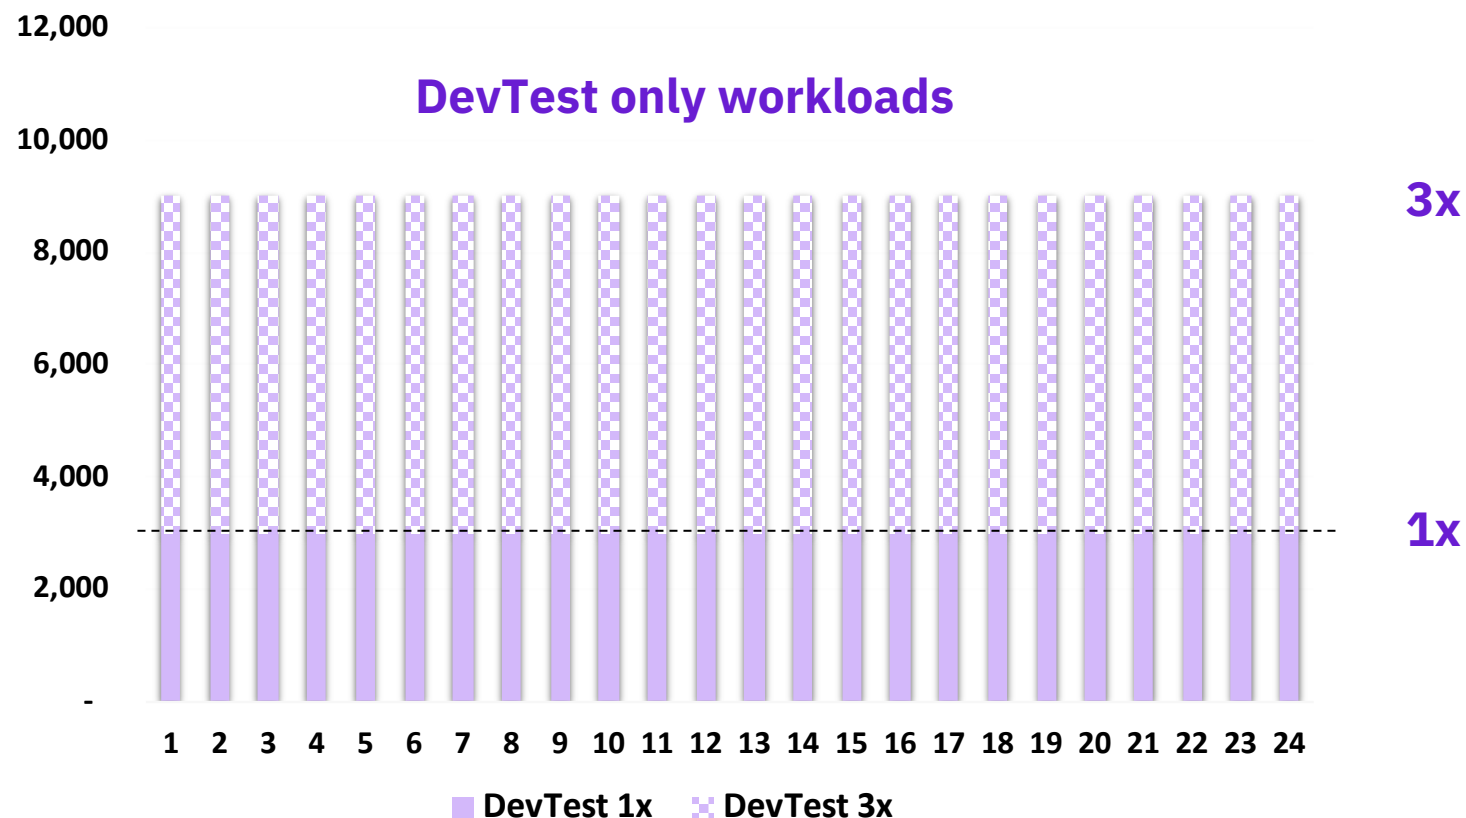

DevTest is now a completely separate, full capacity pricing container.

Example

The container size can increase up to 3x with no extra MLC costs.

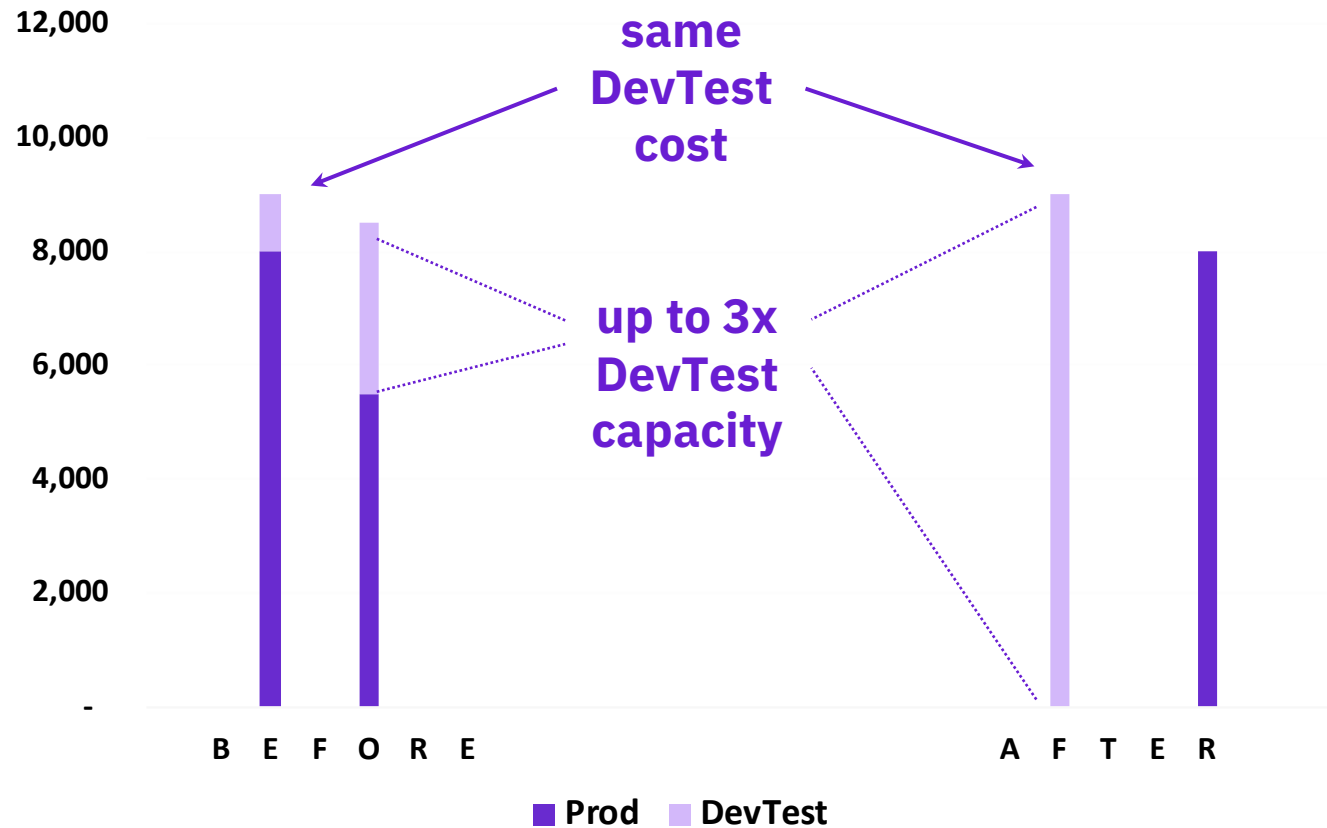

Even above 3x, the MLC is charged at a highly reduced rate.

Summary

The DevTest container offers substantially more capacity without increasing MLC costs.

Typically, a 3x container allows clients to match production capacity in DevTest.

Remember...

Healthy production environments require healthy DevTest environments that fully support modern DevOps pipelines.

With a DevTest container, you can build modern, healthy DevTest environments, without worrying about MLC costs.

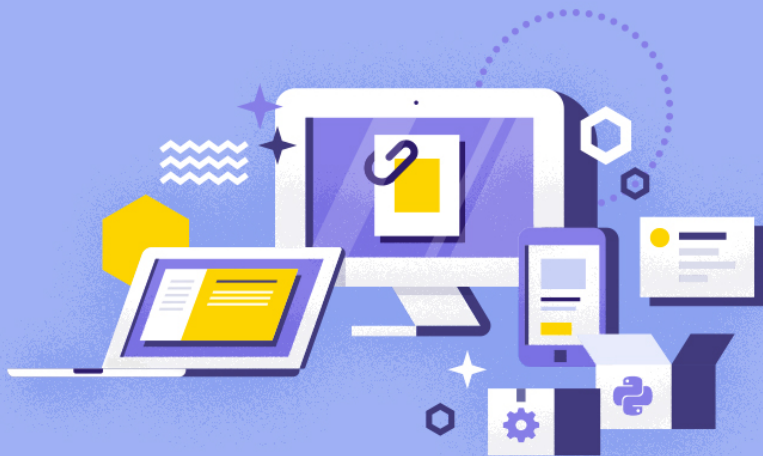

DevTest Containers let you

Run whatever
DevTest workloads
you need.

Whenever and
wherever you
need to run them.

At a price
point you are
happy to pay.
